

Limit overrun race conditions

1. This lab's purchasing flow contains a race condition that enables you to purchase items for an unintended price.
2. While browsing the website, I found a 20% off promo code on the home page.
3. I want to buy a jacket, but its price is \$1337 and I have only \$50. I tried to apply the code more than once, but it is not possible.

```
HTTP/2 302 Found
Location: /cart?couponError=COUPON_ALREADY_APPLIED&coupon=PROMO20
X-Frame-Options: SAMEORIGIN
Content-Length: 22

Coupon already applied
```

4. I think to send the request that apply the code more than once in parallel. It works and the code is applied more than once. Now, I can buy it.
- When the code applied once:

Code	Reduction	
PROMO20	-\$267.40	<button>Remove</button>
Total: \$1069.60		

When the code applied more than once:

Code	Reduction	
PROMO20	-\$1312.93	<button>Remove</button>
Total: \$24.07		

Limit overrun race conditions
