
User role controlled by request parameter

1. This lab has an admin panel at /admin, which identifies administrators using a forgeable cookie.
2. First, I opened burpsuite and tried to login and browse the application.
3. I noticed request when I navigated my account. There is cookie header called admin and set with false.

```
GET /my-account?id=wiener HTTP/2
Host: 0a3e00ea031b3bbf8084216500460008.web-security-academy.net
Cookie: Admin=false; session=BnBo7tB705BsUk5p54FJEzUawwA00j5f
Cache-Control: max-age=0
```

4. I forwarded the request to repeater and change it to true, and I found an admin panel button in response.
5. I navigate to admin panel and set Admin=true and here we go I have access to admin panel.
6. I delete carlos and the lab solved.
