
File path traversal, traversal sequences stripped non-recursively

1. The application strips path traversal sequences from the user-supplied filename before using it.
2. When I inject '../' the application responds with 'No such file'.
I noticed that the application removes '../' from the file name. So, I tried to manipulate payload to adapt with these restrictions. There are many ways to bypass these restrictions.
3. The first way is '.../.../' because when the application removes '../' from my sequence, the '../' will remain.
4. The second way is '..../'
5. The I inject this payload : `.../.../ .../.../ .../.../etc/passwd`
6. The lab solved successfully.

File path traversal, traversal sequences stripped non-recursively
