## **Remote code execution via web shell upload**

---

1. This lab contains a vulnerable image upload function. It doesn't perform any validation on the files users upload before storing them on the server's filesystem.
2. First, I logged in and tried to upload a basic web shell instead of uploading profile photo.
3. It's already uploaded, and I got **RCE** on the website.
4. I read the content of `/home/carlos/secret` and the lab solved.

```
cat /home/carlos/secret
```

Execute

PI50cSoXayScOyWUPPKBYAACYVQMvEHs

Remote code execution via web shell upload
