
Unprotected admin functionality with unpredictable URL

1. This lab has an unprotected admin panel. It's located at an unpredictable location, but the location is disclosed somewhere in the application.
2. I tried to navigate to '/admin' and '/administrator-panel' but both are not found.
3. I opened the page source to find anything helpful. And I already found some JavaScript code seems helpful.

```
var isAdmin = false;
if (isAdmin) {
    var topLinksTag = document.getElementsByClassName("top-links")[0];
    var adminPanelTag = document.createElement('a');
    adminPanelTag.setAttribute('href', '/admin-98cgnh');
    adminPanelTag.innerText = 'Admin panel';
    topLinksTag.appendChild(adminPanelTag);
    var pTag = document.createElement('p');
    pTag.innerText = '|';
    topLinksTag.appendChild(pTag);
}
```

4. This code checks if the logged in user is admin, he will be redirected to admin panel that is named '/admin-98cgnh'. So, I tried to navigate it manually and I already have access to it.
5. I delete carlos and the lab solved.
