
SQL injection UNION attack, determining the number of columns returned by the query

1. This lab contains a SQL injection vulnerability in the product category filter.
- 2.
3. In This lab I need to know how many columns returned by the query and returns an additional row containing null values.
- 4.
5. First, I start with this payload to know how many columns returned:

```
category=Pets' ORDER BY #of_columns--
```

There are three columns returned.

6. The final payload is:

```
category=Pets' UNION SELECT NULL, NULL, NULL--
```

The lab was successfully solved.

SQL injection UNION attack, determining the number of columns returned by the query
