## SQL injection vulnerability in WHERE clause allowing retrieval of hidden data

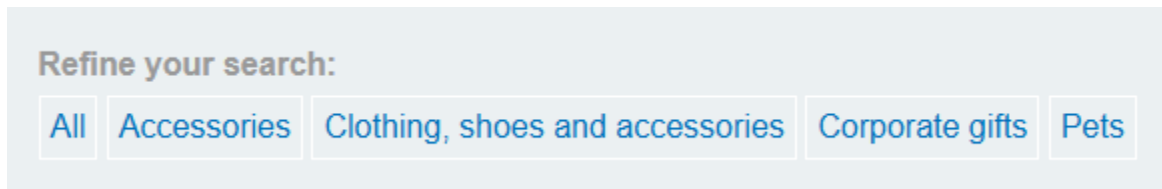

---

1. This lab contains a SQL injection vulnerability in the product category filter.

2. The SQL query is:

```
SELECT * FROM products WHERE category = 'Gifts' AND released = 1
```

3. When I open the home page, I found that I can search by category.

4. When I chose a category, I found a category parameter appeared in the URL:  
`filter?category=Pets`

5. I inject this payload: `' or 1=1--` to display all items not only that their release = 1.
